Foreword

Welcome to the MDG Technology for TOGAF User Guide. The MDG Technology for TOGAF enables you to benefit from The Open Group Architecture Framework within a powerful modeling environment based on open standards.

1 Welcome

Welcome to the MDG Technology for TOGAF - Enterprise Architect MDG Add-In, Version 2.0.

The Add-In enables users of Enterprise Architect to benefit from The Open Group Architecture Framework (TOGAF) within a powerful modeling environment based on open standards.

About TOGAF

The Open Group Architecture Framework (TOGAF) is one of the most widely accepted methods for developing enterprise architecture. TOGAF is an open framework providing a practical, definitive and proven step-by-step method for developing and maintaining enterprise architecture.

The key to TOGAF remains a reliable, practical method - the TOGAF Architecture Development Method (ADM) - for defining business needs and developing an architecture that meets those needs, applying the elements of TOGAF and other architectural assets available to the organization.

TOGAF embodies the concept of the Enterprise Continuum to reflect different levels of abstraction in an architecture development process. In this way TOGAF facilitates understanding and co-operation between actors at different levels. It provides a context for the use of multiple frameworks, models, and architecture assets in conjunction with the TOGAF ADM. By means of the Enterprise Continuum, architects are encouraged to leverage all other relevant architectural resources and assets, in addition to the TOGAF Foundation Architecture, in developing an organization-specific IT architecture.

For detailed information on TOGAF, visit <http://www.opengroup.org/architecture/togaf9-doc/arch/index.html>.

Benefits of MDG Technology for TOGAF

- Helps align business processes and IT to the business strategies and goals
- Provides support for all the phases in the ADM
- Provides support for OMG's Business Motivation Model
- Provides support for the Architecture Content Model
- Provides support for visual modeling of As-Is and To-Be architecture
- Provides support for modeling all four architecture domains specific to TOGAF (Business, Application, Data and Technology)
- Provides support for the report generation of TOGAF work products
- Provides out-of-box FEA reference models.

MDG Technology for TOGAF Features

- A visual clickable Interface for ADM
- Useful starter model to help you become productive quickly.
- UML profiles for FEAF Business, Performance, Service and Technical Reference Models.
- Efficient relationship management for model artifacts with Enterprise Architect's **Relationship Matrix** and **Hierarchy View**.
- Links to external files, audit log and report generation features of Enterprise Architect provide additional capability for the Add-In in maintaining and managing your enterprise architecture.

Getting Started

For instructions on how to start using the MDG Technology for TOGAF, see [Getting Started](#)^[10] and [Using the MDG Technology for TOGAF](#)^[11].

1.2 MDG Technology For TOGAF Software Product License Agreement

MDG Technology for TOGAF, Enterprise Architect MDG Add-In, Version 2.0.

Copyright (C) 2009 Sparx Systems Pty Ltd. All Rights Reserved

IMPORTANT-READ CAREFULLY: This End User License Agreement (EULA) is a legal agreement between YOU as Licensee and SPARX for the SOFTWARE PRODUCT identified above. By installing, copying, or otherwise using the SOFTWARE PRODUCT, YOU agree to be bound by the terms of this EULA.

If YOU do not agree to the terms of this EULA, promptly delete the unused SOFTWARE PRODUCT.

The copyright in the SOFTWARE PRODUCT and its documentation is owned by Sparx Systems Pty Ltd A.C.N 085 034 546. Subject to the terms of this EULA, YOU are granted a non-exclusive right for the duration of the EULA to use and modify the SOFTWARE PRODUCT. YOU do not acquire ownership of copyright or other intellectual property rights in any part of the SOFTWARE PRODUCT by virtue of this EULA.

Your use of this software indicates your acceptance of this EULA and warranty.

DEFINITIONS

In this End User License Agreement, unless the contrary intention appears:

- "EULA" means this End User License Agreement
- "SPARX" means Sparx Systems Pty Ltd A.C.N 085 034 546
- "Licensee" means YOU, or the organization (if any) on whose behalf YOU are taking the EULA.
- "Registered Edition of **MDG Technology for TOGAF**" means the edition of the SOFTWARE PRODUCT which is available for purchase from the web site: (http://www.sparxsystems.com/ea_purchase.htm). Following the thirty day free evaluation period.
- "SOFTWARE PRODUCT" or "SOFTWARE" means **MDG Technology for TOGAF**, which includes computer software and associated media and printed materials, and may include online or electronic documentation.
- "Trial edition of **MDG Technology for TOGAF**" means the edition of the SOFTWARE PRODUCT which is available free of charge for evaluation purposes for a period of 30 days.

GRANT OF LICENSE

In accordance with the terms of this EULA YOU are granted the following rights:

- a) To install and use ONE copy of the SOFTWARE PRODUCT or, in its place, any prior version for the same operating system, on a single computer. As the primary user of the computer on which the SOFTWARE PRODUCT is installed, YOU may make a second copy for your exclusive use on either a home or portable computer.
- b) To store or install a copy of the SOFTWARE PRODUCT on a storage device, such as a network server, used only to install or run the SOFTWARE PRODUCT over an internal network.
- c) To make copies of the SOFTWARE PRODUCT for backup, archival and instructional purposes.

EVALUATION LICENSE

The Trial Version of **MDG Technology for TOGAF** is not free software. Subject to the terms of this agreement, YOU are hereby licensed to use this software for evaluation purposes without charge for a period of 30 days.

Upon expiration of the 30 days, the SOFTWARE PRODUCT must be removed from the computer. Unregistered use of **MDG Technology for TOGAF** after the 30-day evaluation period is in violation of Australian, U.S. and international copyright laws.

SPARX may extend the evaluation period on request and at their discretion.

If YOU choose to use this software after the 30 day evaluation period a license must be purchased (as described at http://www.sparxsystems.com/ea_purchase.htm). Upon payment of the license fee, YOU will be sent details of where to download the registered edition of **MDG Technology for TOGAF** and will be provided with a suitable software 'key' by email.

ADDITIONAL RIGHTS AND LIMITATIONS

YOU hereby undertake not to sell or sub-license the SOFTWARE PRODUCT other than as expressly authorized by this EULA.

NO WARRANTY. The SOFTWARE PRODUCT is provided "AS IS", without warranty of any kind, and SPARX expressly disclaims all warranties and/or conditions with respect to the SOFTWARE PRODUCT, either express, implied or statutory, including, but not limited to, the implied warranties and/or conditions of merchantability, of satisfactory quality, of fitness for a particular purpose, of accuracy, of quiet enjoyment, and of non-infringement of third party rights.

LIMITATION

Under no circumstances shall SPARX be liable for any incidental, special, indirect or consequential damages arising out of or relating to this license or YOUR use, reproduction, modification, distribution of the SOFTWARE PRODUCT, or any portion thereof, whether under a theory of contract, warranty, strict liability or otherwise, even if the copyright holder has been advised of the possibility of such damages and notwithstanding the failure of essential purpose of any remedy.

TRADEMARKS

All names of products and companies used in this EULA, the SOFTWARE PRODUCT, or the enclosed documentation may be trademarks of their corresponding owners. Their use in this EULA is intended to be in compliance with the respective guidelines and licenses. Windows XP is a trademark of Microsoft®.

GOVERNING LAW

This agreement shall be construed in accordance with the laws of the Commonwealth of AUSTRALIA.

1.4 Support

Technical support for the MDG Technology for TOGAF is available to registered users of Enterprise Architect. Responses to support queries are sent by email. Sparx Systems endeavors to provide a rapid response to all product-related questions or concerns.

Registered users can lodge a support request, by visiting:

http://www.sparxsystems.com/registered/reg_support.html.

Trial users can contact Sparx Systems with questions regarding their evaluation at:

support@sparxsystems.com.

An online user forum is also available for your questions and perusal, at

<http://www.sparxsystems.com/cgi-bin/yabb/YaBB.cgi>.

1.5 System Requirements

MDG Technology for TOGAF runs under the following environments:

Operating Systems Supported

- Windows XP Professional
- Windows XP Home
- Windows XP Media Edition
- Windows XP Tablet Edition
- Windows 2000 Professional (SP3 or later)
- Windows Vista (32 bit).

Enterprise Architect Versions Supported

- Enterprise Architect Professional, Version 7.5.845 (or later)
- Enterprise Architect Corporate, Version 7.5.845 (or later)

2 Getting Started

When you install the MDG Technology for TOGAF into Enterprise Architect, the program is enabled and ready for use.

Access the MDG Technology For TOGAF

1. Create a new Enterprise Architect project file, and click on the top-level package.
2. Select the **Add-Ins | TOGAF | Insert New Framework Model** menu option.
3. In the **Name** field, type a name for the model.
4. Click on the **OK** button.

A new base TOGAF model is created, displaying the [TOGAF Interface diagram](#)¹².

3 Using the MDG Technology for TOGAF

The MDG Technology for TOGAF provides a model-based framework for planning, designing and implementing the Architecture for an Enterprise. The starter model provided with the Add-In acts as a base upon which you can build the Enterprise Architecture. You can create the appropriate diagrams from the extended Enterprise Architect UML diagram set, using **Toolbox** pages that support every phase of the TOGAF Interface Diagram. You can also align models across the phases of the Architecture Development Method (ADM) using the Enterprise Architect **Relationship Matrix**.

This chapter describes the:

- [TOGAF Interface Diagram](#) ^[12]
- [TOGAF Model Structure](#) ^[13]
- [TOGAF Add-In Menu](#) ^[14]
- [TOGAF Diagrams](#) ^[15]
- [TOGAF Toolbox Pages](#) ^[16]
- [TOGAF Tasks](#) ^[45]
- [Tagged Values](#) ^[44]
- [TOGAF Linked Document Templates](#) ^[46]

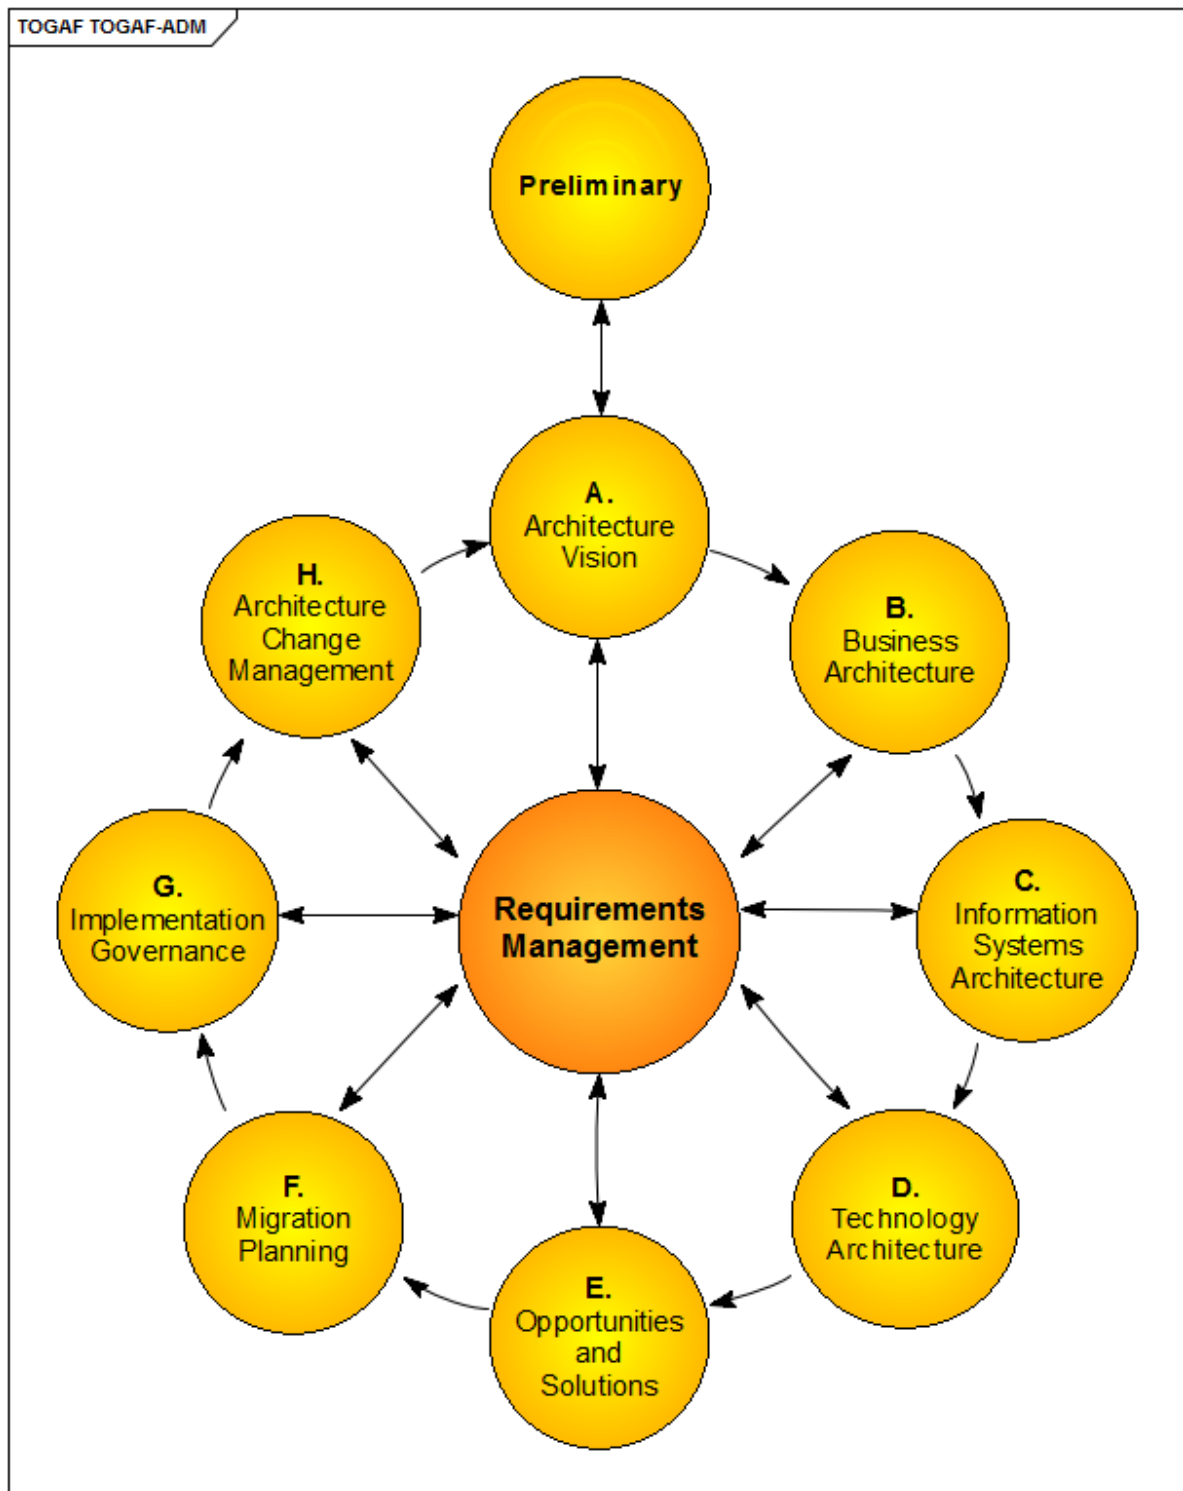

Note that the MDG Technology For TOGAF is integrated with the features of Enterprise Architect, which are documented in the [Enterprise Architect User Guide](#).

3.1 The TOGAF Interface Diagram

In Enterprise Architect, the TOGAF Framework is presented as a predefined model. The model-level diagram of this [model structure](#)^[13] is the TOGAF Interface diagram (illustrated below), which serves as user interface for the development of Enterprise Architecture based on TOGAF.

The TOGAF Framework model makes use of UML Packages, which is apparent from the [model structure](#)^[13] diagram. The interface diagram itself is a standard UML *Package* diagram, using custom images.

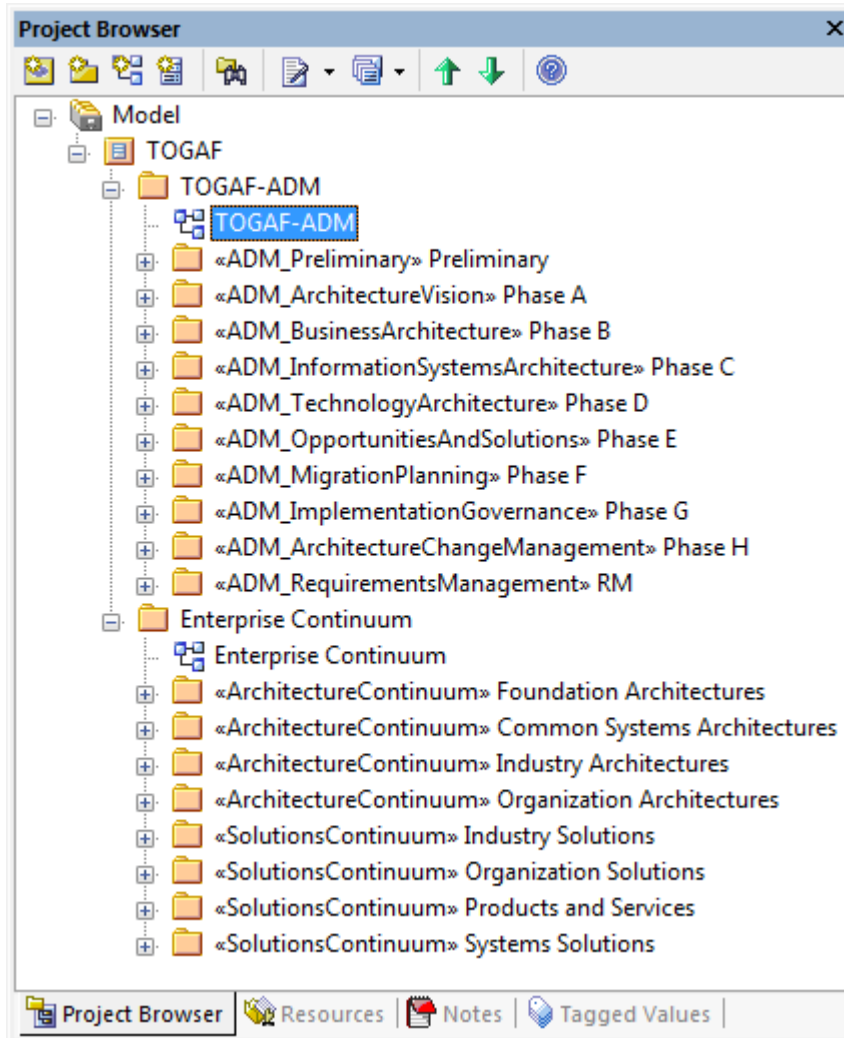

Double-clicking on a cell of the interface diagram opens the model package and diagram corresponding to that particular ADM phase.

3.2 The TOGAF Model Structure

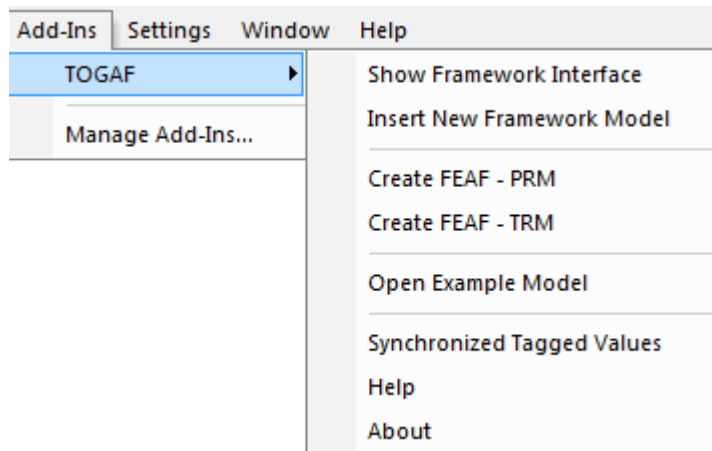

This topic defines the structure of the TOGAF Framework model template.

Each ADM phase is modeled as the highest-level package inside the Framework model.

3.3 The TOGAF Add-In Menu

The MDG Technology for TOGAF menu is available from the **Add-Ins** menu on the Enterprise Architect main menu bar.

The menu options are defined below:

Menu Option	Use To
Show Framework Interface	Open the TOGAF interface diagram of the model.
Insert New Framework Model	Create a new TOGAF template model under the selected package.
Create FEAF - PRM	Create the Performance Reference Model specific to Federal Enterprise Architecture Framework (FEAF) – Version 2.3
Create FEAF - TRM	Create the Technical Reference Model specific to Federal Enterprise Architecture Framework (FEAF) – Version 2.3.
Open Example Model	Load the example TOGAF model.
Synchronized Tagged Values	Add missing Tagged Values to all elements in the model that require them. Select this option whenever a new element is created by any means other than directly dropping the element from the TOGAF Toolbox pages. Also select this option before using a new version of the Add-In, to update the Tagged Values of elements in existing models to the latest version of the TOGAF profile. See Synchronize Tags And Constraints in the <i>Enterprise Architect User Guide</i> .
Help	Open the TOGAF Help file.
About	Display the version information for the MDG Technology for TOGAF.

Troubleshooting:

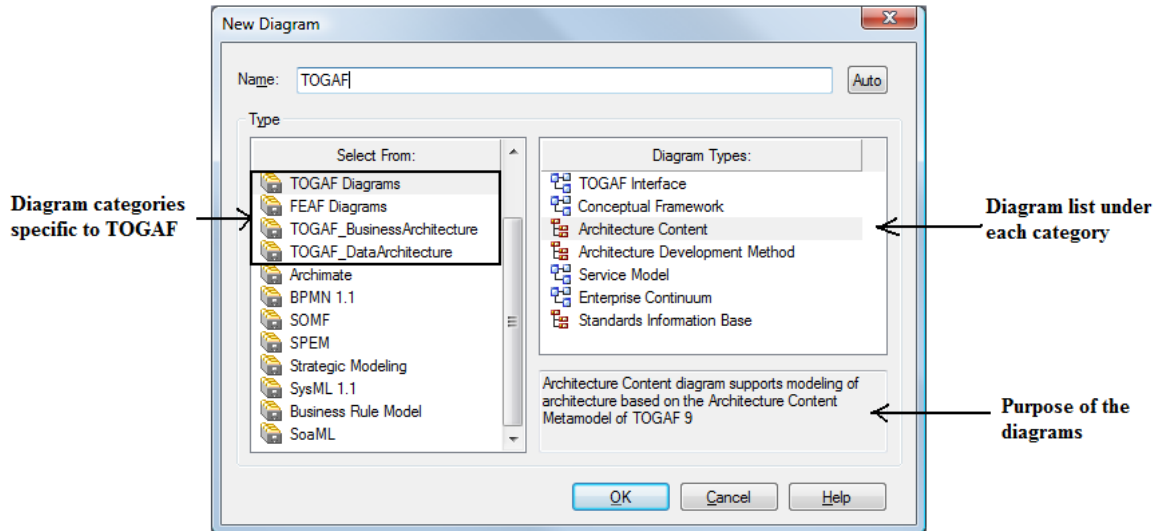

If either the **Add-Ins** menu or the **TOGAF Technology** sub-menu is not visible after installing the TOGAF Add-In, try:

- Selecting the **Add-Ins | Manage Add-Ins** menu option and ensuring that you have selected the **TOGAF Load on Startup** checkbox on the **Manage Add-Ins** dialog.
- Resetting Enterprise Architect's menus with the **View | Visual Layouts | Default Layout** menu option.

3.4 The TOGAF Diagrams

The MDG Technology for TOGAF introduces new diagram types into Enterprise Architect that support modeling of TOGAF. TOGAF-specific diagrams can be created in the same way as for any other diagram in Enterprise Architect; see the [Enterprise Architect User Guide](#) for further details.

When you open a TOGAF diagram, Enterprise Architect automatically opens the appropriate [Toolbox](#) ¹⁶ pages ¹⁶ for that diagram.

Note:

As shown in the above diagram, Enterprise Architect also provides other Service Oriented Architecture tools such as SOMF and SoaML, and broader architecture modeling tools such as Archimate, Strategic Modeling, SPEM and Business Rule Modeling, all of which you can use in conjunction with TOGAF to model and develop your enterprise architecture.

3.5 The TOGAF Toolbox Pages

The MDG Technology For TOGAF **Toolbox** pages provide elements and relationships for all the TOGAF diagrams supported by the MDG Technology for TOGAF. The pages can be accessed by selecting the **More tools | TOGAF** option at the top of the Enterprise Architect UML **Toolbox**.

When you open a TOGAF diagram, Enterprise Architect opens the **Toolbox** pages that are most useful for that particular diagram type. In addition, the **Common** page of elements and relationships displays, regardless of which diagram is open.

The Enterprise Architect UML **Toolbox** pages can be docked on either side of the diagram, or free floated on top of the diagram to expose more surface for editing.

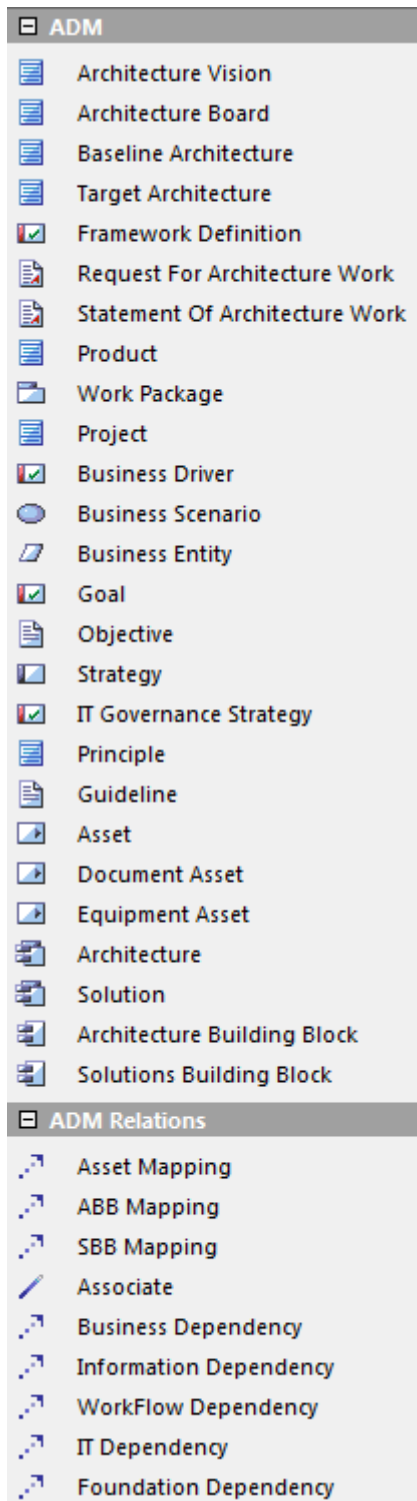

See the following **Toolbox** page descriptions:

- [Architecture Development Method Toolbox Page](#) ^[17]
- [Architecture Content Model Toolbox Page](#) ^[21]
- [Business Motivation Model Toolbox Page](#) ^[29]
- [Business Logistics Toolbox Page](#) ^[34]
- [Business Process Toolbox Page](#) ^[35]
- [Conceptual Framework Toolbox Page](#) ^[36]
- [Enterprise Continuum Toolbox Page](#) ^[37]
- [Organization Chart Toolbox Page](#) ^[38]
- [Data Map Toolbox Page](#) ^[39]
- [Service Model Toolbox Page](#) ^[40]
- [Business Reference Model Toolbox Page](#) ^[41]
- [Performance Reference Model Toolbox Page](#) ^[41]
- [Service Component Reference Model Toolbox Page](#) ^[42]
- [Technology Reference Model Toolbox Page](#) ^[43]

The TOGAF **Toolbox** page menu also provides access to the standard Enterprise Architect *Use Case*, *Class* and *Data Modeling* **Toolbox** pages. Please refer to the online [Enterprise Architect User Guide](#) for descriptions of these pages.

3.5.1 Architecture Development Method Toolbox Pages

Architecture Development Method (ADM) elements are used to define and model the TOGAF specific primitives in all the phases of ADM. These enable you to define the scope of the architecture.

Item	Description								
Architecture Vision	<p>Articulates a vision that enables the business goals, responds to the strategic drivers, conforms with the principles, and addresses the stakeholder concerns and objectives.</p> <p><i>Tagged Values</i> – ID, Scope and Version</p>								
Architecture Board	<p>Captures the definition for a cross-organization Architecture Board. This is a key element in a successful architecture governance strategy, to oversee the implementation of the strategy. This body should be representative of all the key stakeholders in the architecture, and typically comprises a group of executives responsible for the review and maintenance of the overall architecture.</p> <p><i>Tagged Values</i> – ID, Authority Limits and Responsibilities</p>								
Baseline Architecture	<p>Captures the very high-level definitions of the baseline environment from a business information systems and technology perspective. The scope and level of detail to be defined depends on the extent to which existing architecture elements are likely to be carried over into the Target Architecture.</p> <p><i>Tagged Values</i> – ID, Type and Version</p>								
Target Architecture	<p>Captures the very high-level definitions of the target environment, from a business information systems and technology perspective.</p> <p><i>Tagged Values</i> – ID, Type and Version</p>								
Framework Definition	<p>A textual description of the Framework.</p> <p><i>Tagged Values</i> – ID and Version</p>								
Request for Architecture Work	<p>Captures the information for the Request for Architecture Work, a major input for the ADM phases. This element is designed as a <i>Document Artifact</i>. On creating a new element of this type, double click the element to open the linked document and select the TOGAF - Request for Architecture Work template from the list of templates available for the Copy Template option.</p> <p><i>Tagged Values</i> – ID, Architecturing Organization and Sponsoring Organization</p>								
Statement of Architecture Work	<p>Captures the information for the Statement of Architecture Work, a major output for the ADM phases. This element is designed as a <i>Document Artifact</i>. On creating a new element of this type, double click the element to open the linked document and select the TOGAF – Statement of Architecture Work template from the list of templates available for the Copy Template option.</p> <p><i>Tagged Values</i> – ID, Version</p>								
Product	<p>Captures the information of a product produced by the enterprise.</p> <p><i>Tagged Value</i> – ID</p>								
Work Package	<p>A set of actions identified to achieve one or more objectives for the business. A work package can be a part of a project, a complete project, or a program.</p> <p><i>Tagged Values</i> – CapabilityDelivered, WorkPackageCategory, ID, Source and Owner</p>								
Project	<p>Captures the information to define a planned endeavor undertaken to create a product or service.</p> <p><i>Tagged Values</i></p> <table border="0" data-bbox="459 1671 1074 1794"> <tr> <td>ID</td> <td>Process Overview</td> </tr> <tr> <td>FutureDirections</td> <td>References</td> </tr> <tr> <td>Introduction</td> <td>Target Architecture(s) Mapping</td> </tr> <tr> <td>ProjectDevelopment</td> <td></td> </tr> </table>	ID	Process Overview	FutureDirections	References	Introduction	Target Architecture(s) Mapping	ProjectDevelopment	
ID	Process Overview								
FutureDirections	References								
Introduction	Target Architecture(s) Mapping								
ProjectDevelopment									
Business Driver	<p>Defines the business driver in the Name field.</p> <p><i>Tagged Values</i> – ID and Version</p>								
Business Scenario	<p>Identifies and clarifies business needs, and thereby derives the business requirements that the architecture development has to address. Creating a business scenario involves the following steps:</p> <ol style="list-style-type: none"> 1. Identifying, documenting, and ranking the problem driving the scenario. 								

Item	Description												
	<p>2. Identifying the business and technical environment of the scenario and documenting it in scenario models.</p> <p>3. Identifying and documenting desired objectives.</p> <p>4. Identifying the human actors (participants) and their place in the business model.</p> <p>5. Identifying computer actors (computing elements) and their place in the technology model.</p> <p>6. Identifying and documenting roles, responsibilities, and measures of success per actor; documenting the required scripts per actor, and the results of handling the situation.</p> <p>7. Checking for 'fitness-for-purpose' and refining only if necessary.</p> <p>A linked document template for Business Scenario is provided by the Add-In. To use the template, right-click the element and select the Edit Linked Document menu option. Select TOGAF – Business Scenario/Architecture Vision for the Copy template option.</p> <p><i>Tagged Value – ID</i></p>												
Business Entity	<p>Generic element to capture enterprise resources.</p> <p><i>Tagged Values – ID and Description</i></p>												
Goal	<p>Captures what is to be achieved by the enterprise, with specifications defined by the Tagged Values.</p> <p><i>Tagged Values</i></p> <table border="0" data-bbox="459 936 922 1160"> <tr> <td>Assumption</td> <td>Unit Responsible</td> </tr> <tr> <td>Critical Success Factor</td> <td>Opportunity</td> </tr> <tr> <td>Goal Type</td> <td>Strength</td> </tr> <tr> <td>ID</td> <td>Threat</td> </tr> <tr> <td>Key Performance Indicator</td> <td>Weakness</td> </tr> <tr> <td>Measure</td> <td></td> </tr> </table>	Assumption	Unit Responsible	Critical Success Factor	Opportunity	Goal Type	Strength	ID	Threat	Key Performance Indicator	Weakness	Measure	
Assumption	Unit Responsible												
Critical Success Factor	Opportunity												
Goal Type	Strength												
ID	Threat												
Key Performance Indicator	Weakness												
Measure													
Objective	<p>Captures the attainable, time-targeted, and measurable target that the enterprise seeks to meet in order to achieve its goals.</p> <p><i>Tagged Value – ID</i></p>												
Strategy	<p>Captures the strategy statements for the business plan.</p> <p><i>Tagged Values – Action Plan, Estimated Budget, Estimated Time Period, ID, Measure and Target Value</i></p>												
IT Governance Strategy	<p>Defines the strategy statement for IT governance.</p> <p><i>Tagged Values – ID and Version</i></p>												
Principle	<p>Defines and guides the organization, for the use of all assets and resources across the enterprise. Each Principle should be linked to the relevant business objective and key architecture drivers.</p> <p><i>Tagged Values – ID, Implications, Rationale, Statement, Type and Version</i></p>												
Guideline	<p>Captures the Guidelines governing the enterprise and its functions by providing guidance on the optimal ways to carry out design or implementation activities.</p> <p><i>Tagged Value – ID</i></p>												
Asset	<p>Captures the enterprise resources that could be estimated for value.</p> <p><i>Tagged Values – ID, AssetValue and Description</i></p>												
Document Asset	<p>Subtype of Asset to capture the important document resources of the enterprise.</p> <p><i>Tagged Values – ID, AssetValue and Description</i></p>												
Equipment	<p>Subtype of Asset to capture the equipment resources of the enterprise.</p>												

Item	Description												
Asset	<i>Tagged Values</i> – ID, AssetValue and Description												
Architecture	<p>Captures summary views of the Architecture Landscape (i.e. the state of the enterprise) at particular points in time.</p> <p><i>Tagged Values</i></p> <table border="0"> <tr> <td>ID</td> <td>Level Of Detail</td> </tr> <tr> <td>Category</td> <td>Level Of Abstraction</td> </tr> <tr> <td>Source</td> <td>Accuracy</td> </tr> <tr> <td>Owner</td> <td>Version</td> </tr> <tr> <td>Subject Matter</td> <td>Maturity</td> </tr> <tr> <td>View Point</td> <td></td> </tr> </table>	ID	Level Of Detail	Category	Level Of Abstraction	Source	Accuracy	Owner	Version	Subject Matter	Maturity	View Point

Elements in the **ACM** page of the Architecture Content Model **Toolbox**.

Item	Description										
Actor	A person, organization or system with a role that initiates or interacts with activities. Actors can be internal or external to an organization. <i>Tagged Values</i> – ID, Category, Source, Owner, #FTEs, ActorGoal and ActorTasks.										
Assumption	A statement of probable fact that has not been fully validated at this stage, due to external constraints. <i>Tagged Values</i> – ID, Rationale, Statement and Type										
Business Constraint	An external factor that prevents an organization from pursuing particular approaches to meet its goals. <i>Tagged Value</i> – ID										
Business Function	A factor that delivers business capabilities closely aligned to an organization, but not necessarily explicitly governed by the organization. <i>Tagged Value</i> – ID										
Business Requirement	A quantitative statement of business need that must be met by a particular architecture or work package. <i>Tagged Value</i> – ID										
Business Service	A service that supports business capabilities through an explicitly defined interface and is explicitly governed by an organization. <i>Tagged Values</i> <table style="margin-left: 40px; border: none;"> <tr> <td>ID</td> <td>StandardCreationDate</td> </tr> <tr> <td>Category</td> <td>LastStandardReviewDate</td> </tr> <tr> <td>Source</td> <td>NextStandardReviewDate</td> </tr> <tr> <td>Owner</td> <td>RetireDate</td> </tr> <tr> <td>StandardsClass</td> <td></td> </tr> </table>	ID	StandardCreationDate	Category	LastStandardReviewDate	Source	NextStandardReviewDate	Owner	RetireDate	StandardsClass	
ID	StandardCreationDate										
Category	LastStandardReviewDate										
Source	NextStandardReviewDate										
Owner	RetireDate										
StandardsClass											
Capability	A business-focused outcome that is delivered by the completion of one or more work packages. Using a capability-based planning approach, change activities can be sequenced and grouped in order to provide continuous and incremental business value. <i>Tagged Values</i> – ID, Category, Source, Owner, Increments and BusinessValue										
Data Entity	An encapsulation of data that is recognized by a business domain expert as an entity. Logical data entities can be tied to applications, repositories and services, and can be structured according to implementation considerations. <i>Tagged Values</i> – ID, Category, Source, Owner, PrivacyClassification and RetentionClassification										
Gap	A statement of difference between two states. Used in the context of gap analysis, where										

Item	Description												
	<p>the difference between the Baseline and Target Architecture is identified.</p> <p><i>Tagged Values</i> – ID, Category, Source and Owner</p>												
Organization Unit	<p>A self-contained unit of resources with line management responsibility, goals, objectives, and measures. Organizations can include external parties and business partner organizations.</p> <p><i>Tagged Values</i> – ID and PersonInCharge</p>												
Principle	<p>A qualitative statement of intent that should be met by the architecture. This has at least a supporting rationale and a measure of importance.</p> <p><i>Tagged Values</i> – ID, Type, Statement, Rationale, Implications</p>												
Process	<p>A representation of the flow of control between or within functions and/or services (depending on the granularity of definition). Processes represent a sequence of activities that together achieve a specified outcome, can be decomposed into sub-processes, and can show operation of a function or service (at the next level of detail). Processes can also be used to link or compose organizations, functions, services, and processes.</p> <p><i>Tagged Values</i></p> <table data-bbox="501 824 1091 1014"> <tr> <td>ID</td> <td>LastStandardReviewDate</td> </tr> <tr> <td>Category</td> <td>NextStandardReviewDate</td> </tr> <tr> <td>Source</td> <td>RetireDate</td> </tr> <tr> <td>Owner</td> <td>ProcessCriticality</td> </tr> <tr> <td>StandardsClass</td> <td>ProcessVolumetrics</td> </tr> <tr> <td>StandardCreationDate</td> <td>ProcessType</td> </tr> </table>	ID	LastStandardReviewDate	Category	NextStandardReviewDate	Source	RetireDate	Owner	ProcessCriticality	StandardsClass	ProcessVolumetrics	StandardCreationDate	ProcessType

StandardCreationDate	ProcessType												
Platform Service	<p>A technical capability required to provide enabling infrastructure that supports the delivery of applications.</p> <p><i>Tagged Values</i> – ID, Category, Source, Owner and StandardClass</p>												
Role	<p>The usual or expected function of an Actor, or the part somebody or something plays in a particular action or event. An Actor can have a number of roles.</p> <p><i>Tagged Values</i> – ID, Category, Source, Owner and Responsibilities</p>												
Work Package	<p>A set of actions identified to achieve one or more objectives for the business. A work package can be a part of a project, a complete project or a program.</p> <p><i>Tagged Values</i> – ID, Category, Source, Owner and CapabilityDelivered</p>												
Application Component	<p>An encapsulation of application functionality aligned to implementation structure.</p> <p>See also Logical Application Component and Physical Application Component.</p> <p><i>Tagged Values</i></p> <table data-bbox="501 1541 1102 1693"> <tr> <td>ID</td> <td>StandardCreationDate</td> </tr> <tr> <td>Category</td> <td>LastStandardReviewDate</td> </tr> <tr> <td>Source</td> <td>NextStandardReviewDate</td> </tr> <tr> <td>Owner</td> <td>RetireDate</td> </tr> <tr> <td>StandardsClass</td> <td></td> </tr> </table>	ID	StandardCreationDate	Category	LastStandardReviewDate	Source	NextStandardReviewDate	Owner	RetireDate	StandardsClass

3.5.2.5 Motivation Extension

Elements in the [Motivation Extension](#) page of the Architecture Content Model [Toolbox](#).

Item	Description
Business Driver	An external or internal condition that motivates the organization to define its goals. <i>Tagged Values</i> – ID and Version
Goal	A high-level statement of intent or direction for an organization. Typically used to measure success of an organization. <i>Tagged Values</i> – ID, Category, Source and Owner
Objective	A time-bounded milestone for an organization used to demonstrate progress towards a goal. <i>Tagged Values</i> – ID

3.5.2.6 Process Modeling Extension

Elements in the [Process Modeling Extension](#) page of the Architecture Content Model [Toolbox](#).

Item	Description
Control	A decision-making step with accompanying decision logic, used to determine the execution approach for a process or to ensure that a process complies with governance criteria. <i>Tagged Values</i> – ID, Category, Source and Owner
Event	An organizational state change that triggers processing events; can originate from inside or outside the organization and can be resolved inside or outside the organization. <i>Tagged Values</i> – ID, Category, Source and Owner
Product	Output generated by the business. The business product of the execution of a process. <i>Tagged Values</i> – ID, Category, Source and Owner

3.5.2.7 Services Extension

Elements in the [Services Extension](#) page of the Architecture Content Model [Toolbox](#).

Item	Description
IT Service	The automated elements of a business service. An information system service can deliver or support part or all of one or more business services. <i>Tagged Values</i> ID ChargeToUser Category DependentSystems Source StandardsClass Owner StandardCreationDate DefinitionText LastStandardReviewDate ContactPoint NextStandardReviewDate Availability RetireDate

3.5.3 Business Motivation Model Toolbox Pages

The Business Motivation Model **Toolbox** page is based on the OMG specification for Business Motivation Model (BMM). These elements provide a structure for developing, communicating, and managing business plans in an organized manner. (For further information on BMM visit http://www.omg.org/technology/documents/br_pm_spec_catalog.htm.)

The elements in each of the Business Motivation Model **Toolbox** pages are described in the following topics:

- [Means Page](#) ³⁰
- [Ends Page](#) ³⁰
- [Impact Page](#) ³¹
- [Assessment Page](#) ³¹
- [Influencers Page](#) ³²
- [BMM Extended Page](#) ³³

3.5.3.1 Means Page

Elements in the **Means** page of the Business Motivation Model **Toolbox**.

Item	Description								
Means	<p>A Means element groups 'means' concepts (Mission, Course of Action and Directive). A Means represents any capabilities that can be exploited to achieve the desired Ends.</p> <p><i>Tagged Values</i> – ID, Category, Source and Owner</p>								
Mission	<p>A Mission element captures the mission statement, policies and values of the enterprise. A Mission indicates the ongoing operational activity of the enterprise, and makes a Vision operative.</p> <p><i>Tagged Values</i> – ID, Category, Source and Owner</p>								
Course of Action	<p>A Course of Action element groups 'course of action' concepts (Strategy and Tactic). A Course of Action is an approach or plan for configuring some aspect of the enterprise involving things, processes, locations, people, timing or motivation, undertaken to achieve Desired Results.</p> <p>A Course of Action channels efforts towards Desired Results. Courses of Action are governed by Directives. It is also possible for the Courses of Action to be formulated based on Directives. Courses of Action can be realized by Business Processes. One Course of Action can include other Courses of Action, and one Course of Action can be enabled by another Course of Action.</p> <p><i>Tagged Values</i> – ID and Category</p>								
Strategy	<p>A Strategy is the right approach to achieve its Goals, given the environmental constraints and risks. A Strategy usually channels efforts towards those Goals.</p> <p><i>Tagged Values</i> – Action Plan, Estimated Budget, Estimated Time Period, ID, Measure and Target Value</p>								
Tactic	<p>A Tactic is a Course of Action that represents part of the detailing of Strategies. A Tactic implements Strategies.</p> <p><i>Tagged Values</i> – ID and Category</p>								
Directive	<p>Directives indicate how the Courses of Action should, or should not, be carried out. A Directive defines, constrains or liberates some aspect of an enterprise. It is intended to assert business structure or to control or influence the behavior of the business, and is stated in declarative form. Directives govern Courses of Action. A Directive is defined to support the achievement of a Desired Result directly.</p> <p><i>Tagged Values</i> – ID and Category</p>								
Business Rule	<p>A Business Rule element captures the Business Rule statements. Business Rules provide specific, actionable governance or guidance to implement Business Policies. Business Rules guide Business Processes.</p> <p><i>Tagged Values</i></p> <table border="0"> <tr> <td>ID</td> <td>Expiry_From</td> </tr> <tr> <td>Name</td> <td>Status</td> </tr> <tr> <td>Description</td> <td>Version</td> </tr> <tr> <td>Effective_From</td> <td>Enforcement_Level</td> </tr> </table>	ID	Expiry_From	Name	Status	Description	Version	Effective_From	Enforcement_Level
ID	Expiry_From								
Name	Status								
Description	Version								
Effective_From	Enforcement_Level								
Policy	<p>A Policy element captures the policy definitions followed in the enterprise. A Business Policy is a non-actionable Directive whose purpose is to govern or guide the enterprise. Business Policies provide the basis for Business Rules. Business Policies also govern Business Processes. One Business Policy can include other Business Policies.</p> <p><i>Tagged Value</i> – ID</p>								

3.5.3.2 Ends Page

Elements in the **Means** page of the Business Motivation Model **Toolbox**.

Item	Description
End	An End element groups 'end' concepts (Vision and Desired Result).

Item	Description												
	<p>An End is something the business seeks to accomplish. It does not include any indication of how it is to be achieved.</p> <p><i>Tagged Values</i> – ID, Category, Source and Owner</p>												
Vision	<p>A Vision describes the future state of the enterprise, without regard to how it is to be achieved.</p> <p>A Vision is supported or made operative by Missions. It is amplified by Goals.</p> <p><i>Tagged Value</i> – ID</p>												
Desired Result	<p>A Desired Result groups 'desired result' concepts (Goal and Objective). A Desired Result is an End that is a state or target that the enterprise intends to maintain or sustain. A Desired Result is supported by Courses of Action. One Desired Result can include other Desired Results and itself can be included in some other Desired Result.</p> <p><i>Tagged Values</i> – ID, Category, Source and Owner</p>												
Goal	<p>A Goal is a statement about a state or condition of the enterprise to be brought about or sustained through appropriate Means. A Goal amplifies a Vision.</p> <p><i>Tagged Values</i></p> <table> <tr> <td>Assumption</td> <td>Unit Responsible</td> </tr> <tr> <td>Critical Success Factor</td> <td>Opportunity</td> </tr> <tr> <td>Goal Type</td> <td>Strength</td> </tr> <tr> <td>ID</td> <td>Threat</td> </tr> <tr> <td>Key Performance Indicator</td> <td>Weakness</td> </tr> <tr> <td>Measure</td> <td></td> </tr> </table>	Assumption	Unit Responsible	Critical Success Factor	Opportunity	Goal Type	Strength	ID	Threat	Key Performance Indicator	Weakness	Measure	
Assumption	Unit Responsible												
Critical Success Factor	Opportunity												
Goal Type	Strength												
ID	Threat												
Key Performance Indicator	Weakness												
Measure													
Objective	<p>An Objective is a statement of an attainable, time-targeted, and measurable target that the enterprise seeks to meet in order to achieve its Goals. An Objective quantifies a Goal.</p> <p><i>Tagged Value</i> – ID</p>												

3.5.3.3 Impact Page

Elements in the **Impact** page of the Business Motivation Model **Toolbox**.

Item	Description
Potential Impact	<p>A Potential Impact groups the concepts of 'impacts' (Risk and Reward). Each Potential Impact is an evaluation that quantifies or qualifies some aspect of an Assessment in specific terms, types, or dimensions.</p> <p>An Assessment identifies some Potential Impacts. A Potential Impact can be significant to an Assessment.</p> <p><i>Tagged Values</i> – ID, Category, Source and Owner</p>
Risk	<p>A Potential Impact that indicates the possibility of loss, injury, disadvantage or destruction.</p> <p><i>Tagged Value</i> – ID</p>
Reward	<p>A potential impact that indicates the probability of gain.</p> <p><i>Tagged Value</i> – ID</p>

3.5.3.4 Assessment Page

Elements in the **Assessment** page of the Business Motivation Model **Toolbox**.

Item	Description
Assessment	<p>An Assessment is a judgment on an Influencer that affects the organization's ability to employ its Means or achieve its Ends. A Directive is motivated by an Assessment.</p>

Item	Description
	Assessments can also use other Assessments. An Assessment can support the achievement of Ends. <i>Tagged Values – ID, Source and Owner</i>
Strength	This category of Assessment indicates some advantage or area of excellence within the enterprise that can impact its employment of Means or achievement of Ends. It is modeled as a parameter of the Assessment element. <i>Tagged Value – ID</i>
Weakness	This category of Assessment indicates some area of inadequacy within the enterprise that can impact its employment of Means or achievement of Ends. It is modeled as a parameter of the Assessment element. <i>Tagged Value – ID</i>
Opportunity	This category of Assessment indicates that some Influencer can have a favorable impact on the organization's employment of Means or achievement of Ends. It is modeled as a parameter of the Assessment element. <i>Tagged Value – ID</i>
Threat	This category of Assessment indicates that some Influencer can have an unfavorable impact on the organization's employment of Means or achievement of Ends. It is modeled as a parameter of the Assessment element. <i>Tagged Value – ID</i>

3.5.3.5 Influencers Page

Elements in the **Influencers** page of the Business Motivation Model **Toolbox**.

Item	Description
Influencer	An Influencer element groups the elements influencing an Assessment. The Influencers are those that can impact the enterprise in its employment of Means or achievement of its Ends. This impact has influence that is judged in Assessments. <i>Tagged Values - ID and Category</i>
External Influencer	An External Influencer element groups the elements having an external influence on an Assessment. External Influencers are those outside an enterprise's organizational boundaries that can impact its employment of Means or achievement of Ends. <i>Tagged Values - ID and Category</i>
Internal Influencer	An Internal Influencer element groups the elements having an internal influence on an Assessment. Internal Influencers are those from within an enterprise that can impact its employment of Means or achievement of Ends. <i>Tagged Values - ID and Category</i>
Assumption	An Assumption element captures the assumptions made in information manipulation; assumptions are items of information taken for granted or without proof. <i>Tagged Values – ID, Rationale, Statement and Type</i>
Competitor	An External Influencer; an individual or enterprise that poses a challenge to the subject enterprise. <i>Tagged Value – ID</i>
Corporate Value	An ideal, custom or institution that an enterprise promotes or agrees with (either positive or negative). <i>Tagged Value - ID</i>
Customer	An External Influencer; an individual or enterprise that has investigated, ordered, received or paid for products or services from the subject enterprise.

Item	Description
	<i>Tagged Value – ID</i>
Environment	An Environment element is the aggregate of surrounding conditions or Influencers affecting the existence or development of an enterprise. <i>Tagged Value - ID</i>
Habit	A customary practice or use. <i>Tagged Value - ID</i>
Infrastructure	An Internal Influencer; the basic underlying framework or features of a system. <i>Tagged Value – ID</i>
Issue	A point in question or a matter that is in dispute as between contending partners.
Management Prerogative	A right or privilege exercised by virtue of ownership or position in an enterprise. <i>Tagged Value - ID</i>
Partner	An External Influencer; an enterprise that shares risks and profit with the subject enterprise (or is associated with the subject enterprise to share risks and profit) because this is mutually beneficial. <i>Tagged Value – ID</i>
Principle	Defines and guides the organization, for use of all assets and resources across the enterprise. Each Principle should be linked to the relevant business objective and key architecture drivers. <i>Tagged Values – ID, Implications, Rationale, Statement, Type and Version</i>
Regulation	An External Influencer; an order prescribed by an authority such as a government body or the management of an enterprise. <i>Tagged Value – ID</i>
Resource	An internal Influencer; a resource available for carrying out the business of an enterprise, applying its influence especially by way of its quality. <i>Tagged Value – ID</i>
Technology	An External Influencer; the role of technology, including its developments and limitations — there could be prerequisites for use of technology, or an enterprise activity that technology enables or restricts. <i>Tagged Value – ID</i>
Stakeholder	Captures the actors interested and involved in the enterprise. <i>Tagged Value – ID</i>
Standard	Defines the standards followed in the enterprise. <i>Tagged Values – ID, Statement and Type</i>
Supplier	An External Influencer; an individual or enterprise that can furnish or provide products or services to the subject enterprise. <i>Tagged Value – ID</i>

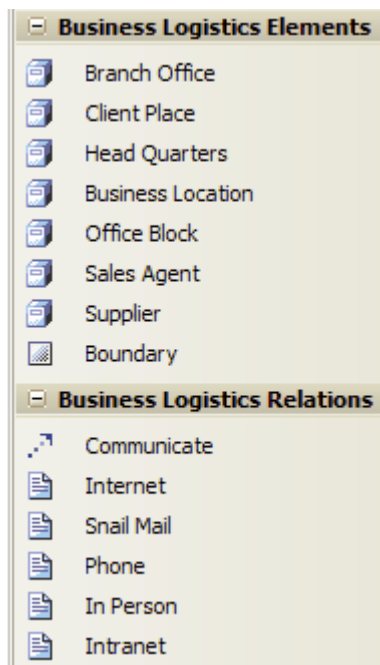

3.5.3.6 BMM Extended Page

Elements in the **BMM Extended** page of the Business Motivation Model **Toolbox**.

Item	Description
Organization Unit	Represents any recognized association of people in the context of the enterprise. In a hierarchical structure, it might be the corporation, a division, a department, a group or a

Item	Description
	team. <i>Tagged Values</i> – ID and PersonInCharge
Liability	A Liability is a reservation of actual resources (materials, finished goods, people's time, cash) to meet commitments. A Liability can be discharged by Courses of Action, can be the responsibility of Organization Units, and can claim Resources. <i>Tagged Value</i> – ID
Asset	An Asset is something of value owned by the enterprise. <i>Tagged Values</i> – ID, Description and AssetValue
Offering	An Offering is a Fixed Asset that is a specification of a product or service that can be supplied by the enterprise. An Offering can be defined by Courses of Action, can be delivered by Business Processes, can require Resources and can use Fixed Assets. <i>Tagged Value</i> – ID
Business Process	A function or behavior of the Enterprise or part of the Enterprise. A Business Process is the responsibility of an Organization Unit, realizes Courses of Action, is guided by Business Rules, is governed by Business Policies, can deliver Offerings and can manage Assets. <i>Tagged Values</i> – ID, Description and ProcessType
Fixed Asset	A Fixed Asset is an Asset that is maintained over time and reused. A Fixed Asset can be used by Offerings and can provide Resources. <i>Tagged Values</i> – ID and AssetValue

3.5.4 Business Logistics Toolbox Pages

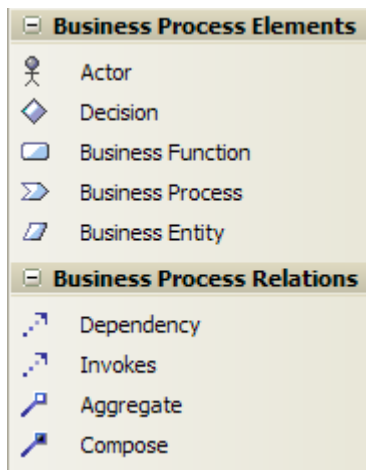

Item	Description
Branch Office	Subtype of Business Location.
Client Place	Subtype of Business Location.

Item	Description
Head Quarters	Subtype of Business Location.
Business Location	Models the location from which the business operates.
Office Block	Subtype of Business Location.
Sales Agent	Subtype of Business Location.
Supplier	Subtype of Business Location.
Communicate	Indicates that a business location communicates directly with another business location.
Internet	Indicates that the means of communication is the World Wide Web.
Snail Mail	Indicates that the means of communication is the postal system or courier services.
Phone	Indicates that the means of communication is the telephone.
In Person	Indicates that the means of communication is direct person-to-person.
Intranet	Indicates that the means of communication is the local intranet or WAN.

Note:

Elements and connectors common to Enterprise Architect UML and Extended diagrams are not documented here. See the [Enterprise Architect User Guide](#) for information on these.

3.5.5 Business Process Toolbox Pages

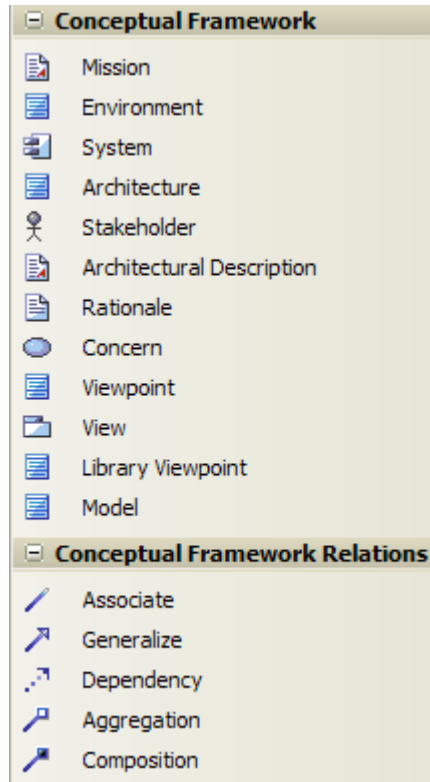

Item	Description
Actor	Models a stakeholder or any other human resource of the Enterprise.
Decision	Indicates point of conditional progression where a business decision is taken.
Business Function	A major function performed by the Enterprise or a part of the Enterprise.
Business Process	A function or behavior of the Enterprise or part of the Enterprise.
Business Entity	Generic element to capture Enterprise resources.
Invokes	Relationship that defines the invocation of a business process.

Note:

Elements and connectors common to Enterprise Architect UML and Extended diagrams are not documented here. See the [Enterprise Architect User Guide](#) for information on these.

3.5.6 Conceptual Framework Toolbox Pages

The Conceptual Framework Elements are used to model the architectural descriptions and to establish concepts for architectural thinking. The **Toolbox** element design is based on IEEE standard 1471 - 2000.

Item	Description
Mission	Captures the mission statement, policies and values of the enterprise. <i>Tagged Value – ID</i>
Environment	Defines the developmental, operational, programmatic context of the system for the purpose of Enterprise Engineering work. <i>Tagged Value – ID</i>
System	Captures details of a working component of the enterprise. System includes, for example, application, system, platform, system -of-systems, enterprise and product line. <i>Tagged Value – ID</i>
Architecture	Captures the definition of the Architecture work. <i>Tagged Value – ID</i>
Stakeholder	Captures the actors interested and involved in the enterprise. <i>Tagged Value – ID</i>
Architectural Description	Captures the definition of Architectural Descriptions. An Architecture Description identifies the system's stakeholders and their concerns.

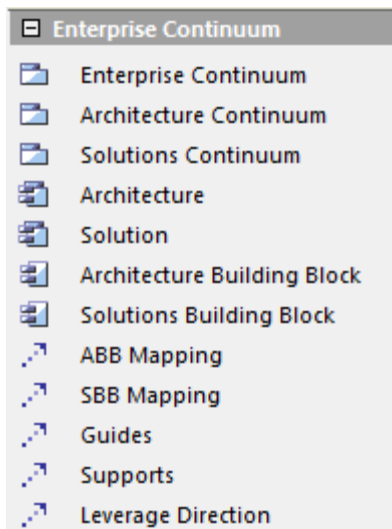

Item	Description
	<i>Tagged Value – ID</i>
Rationale	Captures the statement of purpose for the Architectural Description.
Concern	Forms the basis for completeness. An Architectural Description addresses all stakeholders' concerns. Each Concern is addressed by an Architectural View
Viewpoint	A pattern for constructing Views – Viewpoints define the rules on Views. Each View corresponds to exactly one Viewpoint. <i>Tagged Value – ID</i>
View	A representation of a whole system from the perspective of a set of concerns. A View can contain one or more architectural models, enabling the View to use multiple notations.
Library Viewpoint	Captures a collection of categorized Viewpoints. <i>Tagged Value – ID</i>
Model	Defines and represents a model. <i>Tagged Value – ID</i>

Note:

Elements and connectors common to Enterprise Architect UML and Extended diagrams are not documented here. See the [Enterprise Architect User Guide](#) for information on these.

3.5.7 Enterprise Continuum Toolbox Page

Enterprise Continuum elements are used to model the Architecture Continuum and Solutions Continuum of an enterprise. These elements enable you to create Architecture Building Blocks / Solutions Building Blocks by mapping to the appropriate architecture models / solution models (as diagrams, elements and models).

Item	Description
Enterprise Continuum	A package to model the Enterprise Continuum. <i>Tagged Values – ID, Architecturing Organization, Sponsoring Organization</i>
Architecture Continuum	A package to model the Architecture Continuum.

Item	Description												
Solutions Continuum	A package to model the Solutions Continuum.												
Architecture	<p>Captures summary views of the Architecture Landscape (i.e. the state of the enterprise) at particular points in time.</p> <p><i>Tagged Values</i></p> <table> <tr> <td>ID</td> <td>Level Of Detail</td> </tr> <tr> <td>Category</td> <td>Level Of Abstraction</td> </tr> <tr> <td>Source</td> <td>Accuracy</td> </tr> <tr> <td>Owner</td> <td>Version</td> </tr> <tr> <td>Subject Matter</td> <td>Maturity</td> </tr> <tr> <td>View Point</td> <td></td> </tr> </table>	ID	Level Of Detail	Category	Level Of Abstraction	Source	Accuracy	Owner	Version	Subject Matter	Maturity	View Point	
ID	Level Of Detail												
Category	Level Of Abstraction												
Source	Accuracy												
Owner	Version												
Subject Matter	Maturity												
View Point													
Solution	<p>Captures the summary views of a solution in place for a specific architecture.</p> <p><i>Tagged Values</i></p> <table> <tr> <td>ID</td> <td>Time</td> </tr> <tr> <td>Category</td> <td>Volatility</td> </tr> <tr> <td>Source</td> <td>Version</td> </tr> <tr> <td>Owner</td> <td>Maturity</td> </tr> <tr> <td>Subject Matter</td> <td></td> </tr> </table>	ID	Time	Category	Volatility	Source	Version	Owner	Maturity	Subject Matter			
ID	Time												
Category	Volatility												
Source	Version												
Owner	Maturity												
Subject Matter													
Architecture Building Block	<p>Relates to the Architecture Continuum, and is defined or selected as a result of the application of the ADM.</p> <p><i>Tagged Values</i> – ID, Description, Owning Organization, Rationale, ServicePortfolio</p>												
Solutions Building Block	<p>Relates to the Solutions Continuum, and can be either procured or developed.</p> <p><i>Tagged Values</i> – ID, Description, Supplier Organization</p>												
ABB Mapping	Connector to map the architectural models and artifacts to the Architecture Building Blocks.												
SBB Mapping	Connector to map the solution models and artifacts to the Solutions Building Blocks.												
Guides	Connector to represent <i>guides</i> relationships. ABBs guide the development of SBBs.												
Supports	Connector to represent <i>supports</i> relationships. SBBs support the development of SBBs.												
Leverage Direction	Connector to represent the direction of leveraging of architecture and solution components.												

3.5.8 Organization Chart Toolbox Pages

Organization Chart Elements	
	Board Of Directors
	StakeHolder
	External Organization
	Organization Unit
	Personnel
Organization Chart Relations	
	Dependency
	In Contract
	Works For
	Supervise
	Control

Item	Description
Board of Directors	Captures the details of the board of directors.
StakeHolder	Captures stakeholders of the enterprise.
External Organization	Captures any external business unit that is not under direct control of the enterprise, but has a relationship with the enterprise.
Organization Unit	Captures any business unit that is under direct control of the enterprise.
Personnel	Captures the details of personnel in an enterprise.
In Contract	Captures the contract-based relationships between business units.
Works For	Captures the details of team links; for example, <i>Stakeholder 1</i> works for <i>Organization Unit 1</i> .
Supervise	Captures process supervision details.
Control	Captures <i>Unit in charge</i> or <i>Person in charge</i> information.

Note:

Elements and connectors common to Enterprise Architect UML and Extended diagrams are not documented here. See the [Enterprise Architect User Guide](#) for information on these.

3.5.9 Data Map Toolbox Pages

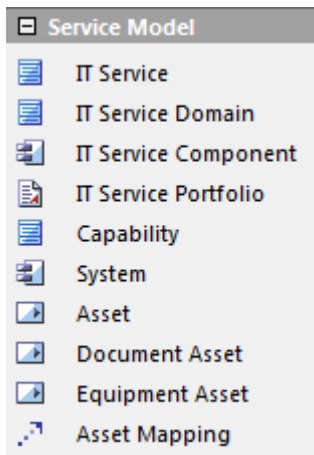

Item	Description
Principal Entity	A business entity that forms a resource of the enterprise.
Intersecting Entity	Normalizes the many-to-many relationship between principal entities.
Structure Entity	Captures potential knowledge base entities.

Note:

Elements and connectors common to Enterprise Architect UML and Extended diagrams are not documented here. See the [Enterprise Architect User Guide](#) for information on these.

3.5.10 Service Model Toolbox Page

Service Model elements are used to build a conceptual framework that describes the IT Service infrastructure of the enterprise.

Item	Description
IT Service	Captures the IT capability offered as a consumable entity that is managed by the enterprise. <i>Tagged Values</i> – ID, DefinitionText, Owner, Availability, Charge_to_User, ContactPoint and Dependent_Systems
IT Service Domain	Categorizes IT services. <i>Tagged Values</i> – ID and Description
IT Service Component	Captures a set of capabilities that might be exposed through the technology interface. <i>Tagged Values</i> – ID, Rationale
IT Service Portfolio	A Document Artifact that captures the information required to describe an IT service portfolio. <i>Tagged Value</i> – ID
Capability	A business-focused outcome that is delivered by the completion of one or more work packages. Using a capability-based planning approach, change activities can be sequenced and grouped in order to provide continuous and incremental business value. <i>Tagged Values</i> – ID, Category, Increments, Business Value, Source and Owner
System	Captures details of a working component of the enterprise. System includes things such as application, system, platform, system-of-systems, enterprise and product line. <i>Tagged Value</i> – ID
Asset	Captures the enterprise resources that could be estimated for value. <i>Tagged Values</i> – ID, AssetValue and Description
Document Asset	Subtype of Asset; captures the important document resources of the enterprise. <i>Tagged Values</i> – ID, AssetValue and Description
Equipment Asset	Subtype of Asset; captures the equipment resources of the enterprise. <i>Tagged Values</i> – ID, AssetValue and Description

3.5.11 Business Reference Model Toolbox Page

The Business Reference Model (BRM) provides a framework facilitating a functional (rather than organizational) view of the enterprise's lines of business (LoBs), including its internal operations and its services.

Item	Description
BRM	A package to capture the Business Reference Model. <i>Tagged Value</i> – Version
Business Area	The high-level organizing layer of the BRM, capturing high-level categories relating to the business purpose and objectives. <i>Tagged Values</i> – BusinessAreaID and Definition
Business Line	Captures the lines of business of the enterprise. <i>Tagged Values</i> – BusinessLineID, Definition and Referencing Business Area
SubFunction	Represents the lowest level of granularity in the BRM, grouping functionalities related to each line of business. <i>Tagged Values</i> – SubFunctionID, Definition, Referencing BusinessLine and Referencing Business Area

3.5.12 Performance Reference Model Toolbox Page

The Performance Reference Model (PRM) **Toolbox** page is designed to conform to the specification of the FEAF-PRM framework. The PRM is a framework for performance measurement providing common output measurements throughout the enterprise. It enables agencies to better manage the business at a strategic level, by providing a means for using an agency's Enterprise Architect to measure the success of IT investments and their impact on strategic outcomes.

The PRM facilitates resource-allocation decisions based on comparative determinations of which programs and organizations are more efficient and effective.

Item	Description
PRM	A package to capture the Performance Reference Model. <i>Tagged Value</i> – Version
Measurement Area	The high-level organizing layer of the PRM, capturing aspects of performance at the output levels. This layer is directly linked to the performance objectives established at the agency and program levels.

Item	Description
	<i>Tagged Values</i> – MeasurementAreaID and Definition
Measurement Category	Categorizes measurement area with respect to the attribute or characteristic to be measured. <i>Tagged Values</i> – MeasurementCategoryID, Definition and Referencing Measurement Area
Measurement Grouping	Further refines measurement categories into specific types of measurement indicators. <i>Tagged Values</i> – MeasurementGroupingID, Definition and Referencing Measurement Category
Measurement Indicator	Captures the specific measures. <i>Tagged Values</i> – MeasurementIndicatorID, Definition and Referencing Measurement Grouping

3.5.13 Service Component Reference Model Toolbox Page

The Service Component Reference Model (SRM) is a business-driven, functional framework classifying Service Components according to how they support business and performance objectives. The model aids in recommending service capabilities to support the reuse of business components and services across the enterprise. The SRM should be structured across horizontal service areas that, independent of the business functions, can provide a leverage-able foundation for reuse of applications, application capabilities, components, and business services.

Item	Description
SRM	A package to capture the Service Component Reference Model. <i>Tagged Value</i> – Version
Service Domain	Captures a high-level view of the services and capabilities that support enterprise and organizational processes and applications. <i>Tagged Values</i> – ServiceDomainID and Definition
Service Type	Groups similar capabilities in support of the domain, providing an additional layer of categorization that defines the context of a specific capability component within a given domain. <i>Tagged Values</i> – ServiceTypeID, Definition and Referencing Service Domain
Service Component	Captures a set of capabilities that might be exposed through a business or technology interface. Service Components are 'building blocks' to deliver the information management capability to the business. <i>Tagged Values</i> – ServiceComponentID, Definition, Referencing Service Domain and Referencing Service Type

3.5.14 Technology Reference Model Toolbox Page

The Technology Reference Model (TRM) is a component-driven, technical framework categorizing the standards and technologies to support and enable the delivery of Service Components and capabilities.

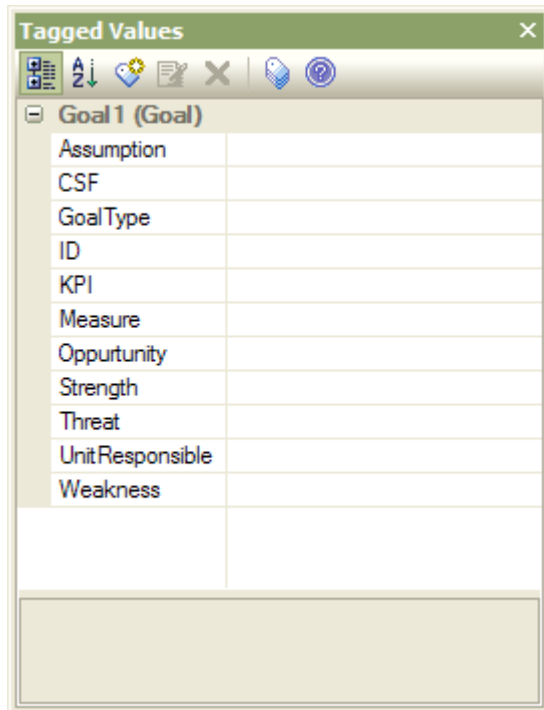

Item	Description
TRM	A package to capture the Technology Reference Model. <i>Tagged Value</i> – Version
Service Area	Represents a technical tier supporting the secure construction, exchange, and delivery of a Service Component. <i>Tagged Values</i> – ServiceAreaID and Definition
Service Category	Classifies a lower level of technology and standard with respect to the business or technology function it serves. <i>Tagged Values</i> – ServiceCategoryID, Definition and Referencing Service Area
Service Standard	Defines a standard and technology that supports a Service Category. <i>Tagged Values</i> – ServiceStandardID, Definition and Referencing Service Category
Standard Specification	Provides the specification details of the standard. <i>Tagged Value</i> – StandardSpecificationID

3.6 Tagged Values

The MDG Technology for TOGAF makes extensive use of Tagged Values for assigning custom properties to the various elements specific to TOGAF. It is recommended that you keep the **Tagged Values** window docked and visible at all times when creating or viewing a TOGAF model.

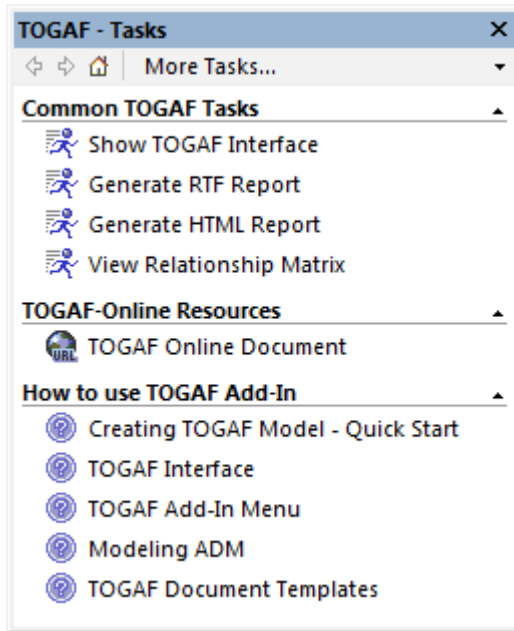

To open the **Tagged Values** window, or bring it to the top if already opened, select the **View | Tagged Values** menu option, or press **[Ctrl]+[Shift]+[6]**. For more information on the **Tagged Values** window, see the [Enterprise Architect User Guide](#).

3.7 The TOGAF Tasks

The Enterprise Architect **Tasks Pane** provides a shortcut method of accessing the tasks defined for TOGAF, without searching through the menu options.

When the MDG Technology for TOGAF is enabled, the Enterprise Architect **Tasks Pane** loads the tasks defined for TOGAF. The **Common TOGAF Tasks** page displays for all phases of the framework.

Task	Description
Common TOGAF Tasks	This group of commands is functional for all ADM phases of TOGAF.
Show TOGAF Interface	Opens the TOGAF Interface diagram. When there are several framework models in a project, a list of available framework diagrams displays. You select the required diagram from this list.
Generate RTF Report	Invokes the Enterprise Architect Generate RTF Report dialog.
Generate HTML Report	Invokes the Enterprise Architect Generate HTML Report dialog.
View Relationship Matrix	Opens the Enterprise Architect Relationship Matrix .
TOGAF-Online Resources	This group of options provides links to online resources.
How To Use TOGAF Add-In	This group of options provides links to Help pages.

3.8 TOGAF Linked Document Templates

The MDG Technology for TOGAF provides document templates that are specific to TOGAF for linked documents.

See the [Enterprise Architect User Guide](#) for more information on Linked Documents.

4 *The TOGAF Architecture Development Method*

The key to TOGAF remains a reliable, practical method - the *TOGAF Architecture Development Method (ADM)* - for defining business needs and developing an architecture that meets those needs, applying the elements of TOGAF and other architectural assets available to the organization.

TOGAF embodies the concept of the [Enterprise Continuum](#)^[52] to reflect different levels of abstraction in an architecture development process. In this way TOGAF facilitates understanding and co-operation between actors at different levels. It provides a context for the use of multiple frameworks, models, and architecture assets in conjunction with the TOGAF ADM. By means of the Enterprise Continuum, architects are encouraged to leverage all other relevant architectural resources and assets, in addition to the TOGAF Foundation Architecture, in developing an organization-specific IT architecture.

Key Points

The following are the key points about the ADM:

- The ADM is iterative over the whole process, between phases and within phases. For each iteration of the ADM, a fresh decision must be taken on:
 - The breadth of coverage of the enterprise to be defined
 - The level of detail to be defined
 - The extent of the time horizon aimed at, including the number and extent of any intermediate time horizons
 - The architectural assets to be leveraged in the organization's Enterprise Continuum, including:

- Assets created in previous iterations of the ADM cycle within the enterprise
- Assets available elsewhere in the industry (such as other frameworks, systems models and vertical industry models).
- These decisions must be made on the basis of a practical assessment of resource and competence availability, and the value that can realistically be expected to accrue to the enterprise from the chosen scope of the architecture work.
- As a generic method, the ADM is intended to be used by enterprises in a wide range of different geographies and applied in different vertical sectors/industry types. As such it can be - but does not necessarily have to be - tailored to specific needs. For example, it can be used:
 - In conjunction with the set of deliverables of another framework, where these are more appropriate for a specific organization. (Many US federal agencies have developed individual frameworks that define the deliverables specific to their particular departmental needs.)
 - In conjunction with the well-known Zachman Framework, which is an excellent classification scheme, but which lacks an openly available, well-defined methodology.

4.1 ADM Documentation

This part of the help document identifies each ADM phase.

Acknowledgement

The approach and complete descriptions are described in the TOGAF 9 documentation available on The Open Group website (<http://www.opengroup.org/architecture/togaf9-doc/arch>). The entries in this help topic link to specific sections of the TOGAF 9 documentation web site, to identify the objectives, inputs, steps and outputs of each phase.

Preliminary Phase: Framework and Principles

The [Preliminary Phase](#) is about defining 'where, what, why, who, and how we do architecture' in the enterprise concerned. The main aspects are as follows:

- Defining the enterprise
- Identifying key drivers and elements in the organizational context
- Defining the requirements for architecture work
- Defining the architecture principles that will inform any architecture work
- Defining the framework to be used
- Defining the relationships between management frameworks
- Evaluating the enterprise architecture maturity

Phase A: Architecture Vision

[Architecture Vision](#) starts with receipt of a *Request for Architecture Work* from the sponsoring organization to the architecture organization. During this phase, you define the architecture scope, how to create the vision, and obtain approvals.

Phase B: Business Architecture

[Business Architecture](#) is the first architecture activity that must be undertaken, if not catered for already in other organizational processes (such as enterprise planning, strategic business planning or business process re-engineering).

Phase C: Information Systems Architectures

In this phase you develop the [Information Systems Architectures](#), including the Data and Applications Architectures. Detailed steps for Phase C are given separately for each architecture domain:

- [Data Architecture](#)
- [Applications Architecture](#)

Phase D: Technology Architecture

The steps within the [Technology Architecture](#) phase are as follows:

- Select reference models, viewpoints, and tools
- Develop Baseline Technology Architecture Description
- Develop Target Technology Architecture Description
- Perform gap analysis
- Define roadmap components
- Resolve impacts across the Architecture Landscape
- Conduct formal stakeholder review
- Finalize the Technology Architecture
- Create Architecture Definition Document.

Phase E: Opportunities and Solutions

In the [Opportunities and Solutions](#) phase you identify the parameters of change, the major phases along the way, and the top-level projects to be undertaken in moving from the current environment to the target.

Phase F: Migration Planning

During the [Migration Planning](#) phase you sort the various implementation projects into priority order. Activities

include assessing the dependencies, costs and benefits of the various migration projects.

Phase G: Implementation Governance

During the [Implementation Governance](#) phase you bring together all the information for successful management of the various implementation projects.

Phase H: Architecture Change Management

In the [Architecture Change Management](#) phase you establish an architecture change management process for the new enterprise architecture baseline.

ADM Architecture Requirements Management

The ADM is continuously driven by the [Architecture Requirements Management](#) process.

5 The TOGAF Enterprise Continuum

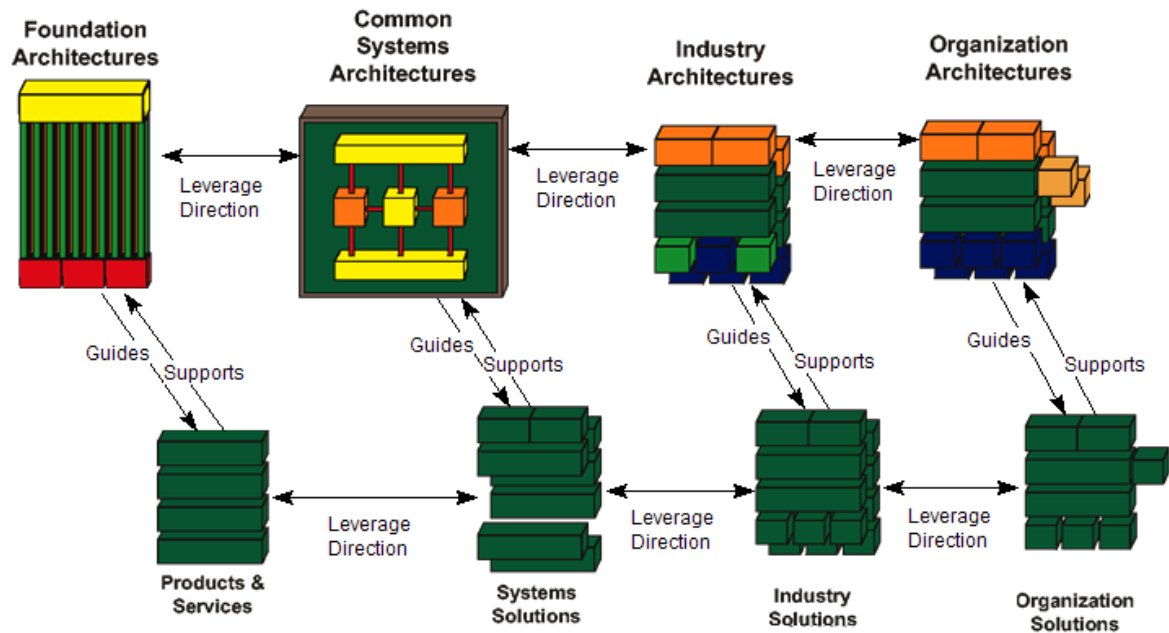

The simplest way to think of the Enterprise Continuum is as a 'virtual repository' of all the architecture assets - models, patterns, architecture descriptions and other artifacts - that exist both within the enterprise and in the IT industry at large, and that the enterprise considers itself to have available for the development of architectures for the enterprise.

Examples of 'assets within the enterprise' are the deliverables of previous architecture work that are available for re-use.

Examples of 'assets in the IT industry at large' are the wide variety of industry reference models and architecture patterns that exist and that are continually emerging, including those that are:

- highly generic, such as TOGAF's own Technical Reference Model (TRM)
- specific to certain aspects of IT, such as a web services architecture, or a generic manageability architecture
- specific to certain types of information processing, such as e-Commerce or supply chain management
- specific to certain vertical industries, such as the models generated by vertical consortia like TMF (in the Telecommunications sector), ARTS (Retail) or POSC (Petrotechnical).

Sparx Systems' Enterprise Architect support for Enterprise Continuum is provided by the Enterprise Continuum diagram and the corresponding [Toolbox](#) page. The starter model consists of an interface to the TOGAF Enterprise Continuum.

When you double-click on an Architecture Continuum and Solution Continuum, an *Enterprise Continuum* diagram displays. The [Toolbox](#) page provides the Architecture Building block, Solution Building block elements and the appropriate relationship connectors.

6 Support For Federal Enterprise Architecture Framework

MDG Technology for TOGAF provides diagrams and **Toolbox** pages specific to the Federal Enterprise Architecture Framework (FEAF). It also provides 'out-of-the-box' models of the FEAF Performance reference model and Technical Reference model.

To [open FEAF-PRM and FEAF-TRM models](#)^[14], select the **Add-Ins | TOGAF | Open FEAF - Performance Reference Model** or **Open FEAF - Technical Reference Model** menu option respectively.

The following Enterprise Architect UML **Toolbox** pages provide specific support for FEAF:

- [Business Reference Model Toolbox Page](#)^[41]
- [Performance Reference Model Toolbox Page](#)^[41]
- [Service Component Reference Model Toolbox Page](#)^[42]
- [Technology Reference Model Toolbox Page](#)^[43]
