Engage the Future
Enterprise Architect 15
Enterprise Architect

A landmark release from Sparx Systems, version 15 firmly cements Enterprise Architect as the global leader in delivering highly effective, agile, standards based modeling tools to enterprises, businesses, governments and developers worldwide.

Clarity
Reworked and optimized visuals provide a cleaner, faster and more intuitive diagramming experience to help you make the right decisions and create stunning visual designs. Hundreds of UI changes to ensure a rich and user friendly experience that promotes rapid development, strong understanding of models, traceability, focus and accuracy.

Tooling
Custom drawing styles let you choose how to represent design elements with custom shapes, transparencies, colors and images. Unleash your creativity and build the visual representations your customers are familiar with. Decision Modeling Notation, Data Miner, Diagram matrix view, Diagram Construct View, Custom Tables, Custom Diagram Styles, New Element Browser, New Portals and New Diagram Browser.

Extensibility
Leverage Model Based Add-Ins, new scripting capabilities, new technologies, new tools and more to quickly and effectively extend your models and designs with new directions and new domain driven spaces. Google & AWS Enterprise Icons, Value Delivery Modeling Language (VDML), Business Motivation Model (BMM) and Decision Modeling Notation Decision Service.

Vision
New server based deployment options and integration points with Sparx Systems Pro Cloud Server, Enterprise Architect and Prolaborate provide a highly scalable and effective solution for integrating, visualizing and managing your past, present and future architecture, capabilities, processes and assets. Flexible deployment options, global connectivity, and web enabled sharing.

Control
Tightly integrated change, defect, issue, task and test management. Capture the full story and control your future. Use Time Aware Modeling to build your road map. With new private Cloud based components and deployment options, zero configuration deployment capabilities, and minimal setup strategies it is now dramatically easier to provide your entire organization with access to Enterprise Architect's rich suite of modeling tools.

Governance
Take advantage of Model Based Add-Ins to enforce new work-flows, governance and control within your mission critical models. Leverage the group based security restrictions on Perspectives (technologies) and Ribbon sets to ensure your modelers see only the tools and technologies relevant to them.
